# JANSETU

### App Flow Modifications & Additional Functional Requirements

Hello,

I have reviewed the JANSETU App Flow shared by you. After reviewing it, I would like to suggest certain modifications, improvements and additional functional features. Please incorporate all the following requirements into the App Flow and the actual application.

## 1. Changes in the Survey Screen

1. Remove the White Colour option from Colour Tags.

**Influencer:** Provide Yes / No options. If Yes is selected, display a searchable dropdown to select the relevant position or category from the following options:

- Sarpanch
- Panch Member
- Up Sarpanch
- ZP Member
- Ex. ZP Member
- MLA
- Ex. MLA
- NGO
- Social Worker
- News Reporter
- Social Media Influencer

2. Remove the separate **Important Voter** field. Use the Influencer field instead.
3. Remove the Two-Wheeler and Mandal/Group fields.

**Self Help Group:** If Yes is selected, display a Group Name input field.

4. Ration Card options should be limited to AAY, PHH and NPHH.
5. Provide a facility to add and maintain synced notes for the entire Part.
6. Provide a separate filter to identify and search voters marked as Influencers.

## 2. Kutumb Connect (Family Management)

7. Families should be automatically created within the application based on House Number. The system should generate the initial family grouping using the available House Number information.
8. Surveyors should have the option to manually add or remove members from an automatically created family.
9. There should be no Family Head option or mandatory Family Head designation in this section.
10. Replace the term "Family" with "Kutumb Connect" throughout the relevant application screens and navigation.
11. No WhatsApp API integration is required. A standard WhatsApp sharing option will be sufficient.

## 3. Voter Profile and History

12. The History section should maintain a record of every update made to a voter profile.
13. It should clearly record:

- What information was changed.
- Who made the change.
- Date and time of the change.

14. Add a Polling Time field/option to the Voter Slip.
15. On Page 5, replace the term "Voter History" with "Information Updation" or "Updation".

## 4. Polling Day and Election Management

16. Admin and Super Admin should have permission to Add / Edit Elections and Candidates.
17. Polling Time should be included in the Voter Slip.
18. Retain the existing Polling Day features.

## 5. Data Management and Access Control

19. Remove the "Spelling Fixes" screen.
20. Only Super Admin should have permission to edit Official Electoral Roll Data.
21. If any other user attempts to edit Official Electoral Roll Data, the system should display a 403 Access Denied response.
22. "Not Registered" and "New Voter" should not be maintained as two separate categories. Both should represent the same category.
23. On Page 3, replace "New Voter" with "Eligible but Not Registered".

## 6. Communication Features

24. Provide a Bulk Message option.
25. Allow individual voters to be contacted through Text Message or WhatsApp.
26. Provide a direct Calling option from the Voter Profile.
27. Both Bulk Communication and Individual Communication facilities should be available.

## 7. Reports and Analytics

All reports available in JANSETU should be accessible at the following three levels:

- Assembly Constituency (AC) Level
- Village Panchayat Level
- Part / Booth Level

**Surname-wise Search and Reports:**

28. Add a Surname-wise Search option in Voter Search.
29. Display the total number of voters belonging to a selected surname at Assembly Constituency, Village Panchayat and Part levels.
30. Allow users to download the detailed list of voters with the selected surname at each of these levels.

**Expected Reports:**

- Surname-wise Voter Summary

- Surname-wise Detailed Voter List
- AC-wise Summary
- Village Panchayat-wise Summary
- Part-wise Summary
- Male, Female and Third Gender Voter Count
- Influencer List
- Eligible but Not Registered Voters List

Reports should have relevant filters, including AC, Village Panchayat, Part Number, Surname, Gender, Age Range and Influencer.

Reports should be downloadable in Excel, PDF and CSV formats.

## 8. Matching Engine

The Matching Engine option is not visible in the App Flow shared by you. Therefore, a separate Matching Engine option must be added.

31. Compare Old Electoral Rolls with New Electoral Rolls.
32. Match voters between previous and updated electoral rolls.
33. Identify newly added voters, deleted voters and voters whose details have changed.
34. Preserve previously collected survey information when the Electoral Roll is updated.
35. Provide options to view Matching Results and download the relevant reports.

## 9. Know My Constituency

Add a separate option named "Know My Constituency" in the application.

**A. Geographical Data**

- Geographical information of the Constituency.
- Information based on Village Panchayat and Part / Booth.

**B. Demographic Data**

- Total voter population.
- Male, Female and Third Gender voter count.
- Other available demographic information.

**C. Previous Election Data**

- Previous MP Election Data.
- Previous AC Election Data.
- Previous ZP Election Data.

**Access Restriction:** This section should be accessible only to Admin and Core Staff. Other users should not have access to this option.

## 10. App Flow and Navigation Requirements

36. Incorporate all the above changes into the existing App Flow at appropriate locations.
37. Add new screens, options, filters and sub-menus wherever required.
38. Clearly demonstrate the navigation and user flow for Matching Engine, Know My Constituency, Reports and Communication Features.

39. All relevant features should be available on the Web Portal as well as the Android Application.
40. Ensure proper data synchronization and user permission management across both platforms.

**Important:** Please ensure that all the above requirements are implemented as fully functional features and not merely as UI designs, dummy screens or static options.

Kindly share the updated App Flow along with the revised screens and navigation flow incorporating all the above changes, so that we can review and approve them before proceeding further with development.

Thank you.
